

## **AFRICA**

## **Physical Features**

	/ ·	
	Sahara Desert	This used to be a lush region with many plants/animals but dried out 4000 years ago. It covers 3.6million km <sup>2</sup> and is one of the hottest places on Earth (up to 46°C) but often below freezing at night. Known for sand dunes and salt flats.
	Congo Basin	The Congo rainforest in central Africa contains one of the longest rivers in the world, the Congo River. The tropical rainforest is home to a diverse range of plants and animals.
	Atlas Mountains	The Atlas Mountains are a mountain range in northwest Africa. They run 2,410km from the Atlantic coast of Morocco to northeast Tunisia. They are not all joined and are separated by large areas of land called plateaus.
	Great Rift Valley	Stretches from the Middle East in the north to Mozambique in the south and is geologically active featuring volcanoes, hot springs, geysers and frequent earthquakes.
	Hur	nan Features
V	Deforestation	The leading cause of deforestation in Africa is due to large numbers of developing countries relying heavily on wood fuel, the major energy source for cooking and heating. This occurs in Sub- Saharan areas.
V	Poaching	Illegal poaching and trade of endangered animals has been a huge issue in Africa for many years. Elephant tusks (ivory) and rhino horns (hair) are removed after killing the animal and then sold for huge prices.
n	Famine and Poverty	27 of the world's poorest 28 countries live in Sub-Saharan Africa where there is a lack of access to safe water and sanitation. This has been the result of political instability, conflicts, climate change and man-made causes.

Fact Box Africa is a continent made up of 54 different counties with Algeria being the largest in terms of area (2.4 million km²).
